Grants subjects	ECO-1 “Model of organoids for drug screening and drug repurposing”
DESCRIPTION OF THE RESEARCH	The project involves the development of three-dimensional (3D) cellular organoids that reproduce the microenvironment in vitro in order to simulate an in vitro model with characteristics close to those of the organ compared to normal two-dimensional (2D) cultures, thus mimicking the molecular mechanisms that regulates the organ. Organoids will allow to study the effectiveness of pharmacological treatments for neurological disorders and diseases in high need of treatment.

Grants subjects	<p><b>ISS-1</b> <i>“Identification and characterization of new molecular pathways in undiagnosed disease”</i></p> <p><b>ECO-1</b> <i>“Evaluation of new pharmacological and probiotic approaches for the treatment of fibrosis in inflammatory bowel disease”</i></p>
DESCRIPTION OF THE RESEARCH	<p>ISS-1 The unmet needs of Undiagnosed Rare Disease Patients (URDP) represent a global issue: joint actions are crucial to help patients and professionals to share expertise and information across borders. All around the world, specific undiagnosed disease programs have been established to address this issue. For these reasons the Istituto Superiore di Sanità and the Human Genetics Division of the University of L'Aquila are aimed to join efforts within the frame of a consolidated collaboration between these Institutions and the Undiagnosed Diseases Network International based at NIH (USA).</p> <p>Aim: To define the molecular bases of yet URDPs using the available tools to characterize the phenotype and the genotype of such individuals. In particular, the Human Phenotype Ontology and modern next-generation sequencing strategies will be used together with cellular and molecular techniques to study the pathogenic effect of genetic alterations. This will improve the recognition of previously undiagnosed disorders and identify novel molecular mechanism underlying multi system disorders, paving the way to molecular and personalized medicine.</p> <p>ECO-1 Intestinal fibrosis is a frequent and serious complication of IBD (Inflammatory Bowel Disease). Anti-inflammatory drugs can reduce inflammatory lesions and related clinical signs, but they do not prevent or alleviate intestinal obstruction. Thus, the definition of new effective therapeutic strategies in the prevention and treatment of intestinal fibrosis, represents an urgent need and the most important clinical challenge.</p> <p>Aims:</p> <ol style="list-style-type: none"> <li>1. Deepen the knowledge on the mechanisms underlying intestinal fibrosis in search of more effective therapeutic targets.</li> <li>2. To study the anti-fibrotic effects of drugs currently used in the clinic (salicylates, steroids, immunosuppressive drugs, biological drugs) and of selected probiotics on in vitro, ex vivo and in vivo models of intestinal fibrosis (human intestinal fibroblast and epithelial cell lines, epithelium-mesenchymal transition models (EMT), human intestinal organoids, intestinal biopsies of patients with IBD. In addition, an experimental model of chronic colitis induced by dextran sodium sulfate (DSS) will be used as an in vivo model.</li> </ol>

There are 3 methodologies to sign it and the candidate must select one of them and read carefully they directions.

According to article 3 of the call the possible methodologies are the following:

- By digital signature using smart card, USB token or remote signature which allow the owner to sign general documents by means of a signature software or a Remote Signature web portal made available by the Auditor. Those who have a Digital Signature smart card or USB token shall verify that they are compatible with the Digital Signature system integrated in the system server. If so, the owner may sign the application directly in the system server (e.g. ConFirma);
- Those who do not have compatible digital signature devices and the Remote Digital Signature Owners who may access a web portal for signing general documents shall save in their own PC the .pdf file generated by the system and, without modifying it, digitally sign it in CADES format. A .p7m file will be generated, which shall be saved and uploaded again in the system. Any editing to the file before signing with the Digital Signature shall interfere with the automatic check of correspondence between the content of such a document and the original, and this will bring to the application exclusion;
- If none of the above-mentioned options can be used candidates shall save in their own PC the .pdf file generated by the system and, without modifying it, print and sign it with full original signature in the last page of the printed document. A scanned .pdf copy of such a document shall be produced and the file thus obtained shall be uploaded to the system.

In case the access to the platform is via SPID, it is not necessary to sign the application with one of the aforementioned methods.

In case the applicant decides to sign the PDF file he/she must verify that the file that is going to be upload is complete because the system accept only one PDF file.

After the submission applicants will receive an email with the confirmation of the submission. Applicants will always be able to login to their account, personal data and application form.

### 3. APPLICATION FORM MODIFICATION OR WITHDRAWAL

- If they have created the pdf file but they have not completed the submission (the pdf file has not been uploaded yet and so they haven't received the email of confirmation) then they must contact support via the link at the bottom of the page <https://pica.cineca.it/univaq> and ask to have the application re-opened. In the email they must specify the reason of their request, the ID of their application form and attach copy of their identity document.
