

Pre-disaster planning for Urban Cultural Heritage

International Academic Conference

19th June 2021

Venue: L'Aquila

Platform: online - Cisco Webex

This century is facing an increasing number of hazards and the vulnerability of historical and cultural heritage is putting them on high risk. The module offers an overview of how to mitigate disaster for urban historical centres and cultural heritages.

The CHIC project concerns shaping and transferring the cultural heritage of Europe, its multicultural image, transnational character, which are the basis for shaping the sense of social and cultural unity of Europeans and for strengthening European identity and active citizenship; the presence of a European cultural heritage in selected partner cities. The city is understood as a tool for finding a cultural community between the national heritage of partner countries and the cultural heritage of Europe. This is particularly important in the period of intensified migration and the phenomenon of cultural transformation, where the boundaries of national cultures are blurred and create multiple identities. It is equally important for native Europeans to understand the cultural community of nations and minority and majority societies that make up Europe. In this cultural framework, the awareness that leads to reduce vulnerability and increase resilience, acquiring sustainable land management tools can't think only about planning and reconstruction or emergency plans. It is necessary to plan territories and cities with an approach in which adaptation and prevention are preceded by a planning that avoids vulnerability as much as possible. This can be achieved with a planning that puts a territory in a safe condition; this can only be done by looking at a planning as participatory and inclusive as possible. The conference therefore invites theoretical and practical contributions and case studies that take into account pre-disaster planning.
