

**TITLE: Circular Economy experts from industry and academia meet at the historic Schoenbrunn Castle in Vienna from November 26-29, 2018**

**EXCERPT:** The EU project FENIX will organise a session on practical use cases for value-added products during Going Green – CARE INNOVATION 2018 on November 28, 2018 in Vienna (Austria). The event is highly relevant for experts working on raw materials and circular economy in general.

**KEYWORD:** circular economy in practice

**ARTICLE BODY:**

***The EU project “FENIX – Future business models for the Efficient recovery of Natural and Industrial secondary resources in eXtended supply chains contexts” will organise a session on practical use cases for value-added products during Going Green – CARE INNOVATION 2018 on November 28, 2018 in Vienna (Austria). Leading experts will present our business models, the reconfiguration and integration of our 3 pilot plants (assembling/disassembling of products/wastes from Politecnico di Milano, bio-hydrometallurgical processes from University of L’Aquila and 3D additive manufacturing from Fundació Centre CIM) and the use cases for value-added product-services. During the whole conference I3DU will show first results in 3D scanning and printing as well as the University of L’Aquila output materials after their recovery processes in our FENIX exhibition booth. (Bernd Kopacek, Vienna, 19.10.2018)***

**Going Green – CARE INNOVATION 2018** conference and exhibition on Electronics and the Environment will take place in **Schoenbrunn Palace Conference Centre Vienna** (Austria), which is situated in the Apothecaries’ Wing of the famous building. This Symposium is the only platform for presenting the up-to-date progress on sustainable development and the development of eco-efficient products.

The program will feature the latest in circular economy, environmental design, clean manufacturing, resource efficiency, climate change, new eco-efficient technologies, collection, reverse logistics, refurbishment, carbon trading, re-use, recycling and policy making from leading experts in industry, academia, consulting, recyclers and public area around the globe. Leading companies and institutions in green electr(on)ics will present their innovative products, processes and services at the exhibition.

All companies in the electr(on)ics, telecom, automotive, solar and PV, chemical, raw material processing and recycling industry, power suppliers, electricity generators and distributors, contract manufacturers, material and component suppliers, service and logistic companies, collective systems, academia, consulting and public authorities (local, regional, international) are invited to attend and contribute.

### Top-Reasons for attending

- World's leading and most prominent congress on electr(on)ics and the environment including an International Meeting Place, Environmental Exhibition and Technical Tours
- Throughout the world **Going Green – CARE INNOVATION 2018** is the only event, where experts from companies in the electr(on)ics, automotive, energy, chemical and recycling industry, contract manufacturers, material and component suppliers, service and logistic companies, collective systems, academia, consulting and public authorities (local, regional, international) set the course for future trends in technologies, markets and sustainability.
- Meet your future clients raise their attention and make your products and services known to them. A major step to increase your business in the future.
- More than **60%** of all participating experts hold management positions in **companies**.
- Due to the **intense co-operation** with our partner conferences the **international character** of the event is very high. 427 experts from 37 European, Asian, American, African countries and Australia took part in 2014.
